

SINGLE MRI UNIT

Facility Type	Single MRI Suite
Programme (Order to Handover)	13 weeks
Facility Size	56m ²
ModuleCo Scope of Works	Design and Build - Facility only
Procurement Route	Purchase

PROJECT

Over the past few months, ModuleCo have been working closely with a diagnostic imaging provider to design standard products to suit their static relocatable range of imaging facilities.

Our first project together is going to be the provision of an MRI unit to be located at Princess Royal Hospital.

FACILITY

Our first unit together is a bespoke size to suit the complex requirements of the site. Our inhouse design team were able to adjust the facility size to match the maximum width available in the site location.

By ensuring the unit was sized to fit on the existing slab, the reduced module width meant that the 5 Gauss line of the MRI scanner now fell outside of the unit. To overcome this, we introduced 2mm of Armco Steel into the structural frame of our modular unit to contain this. We have managed to achieve this all within the same 13-week programme from design completion.
